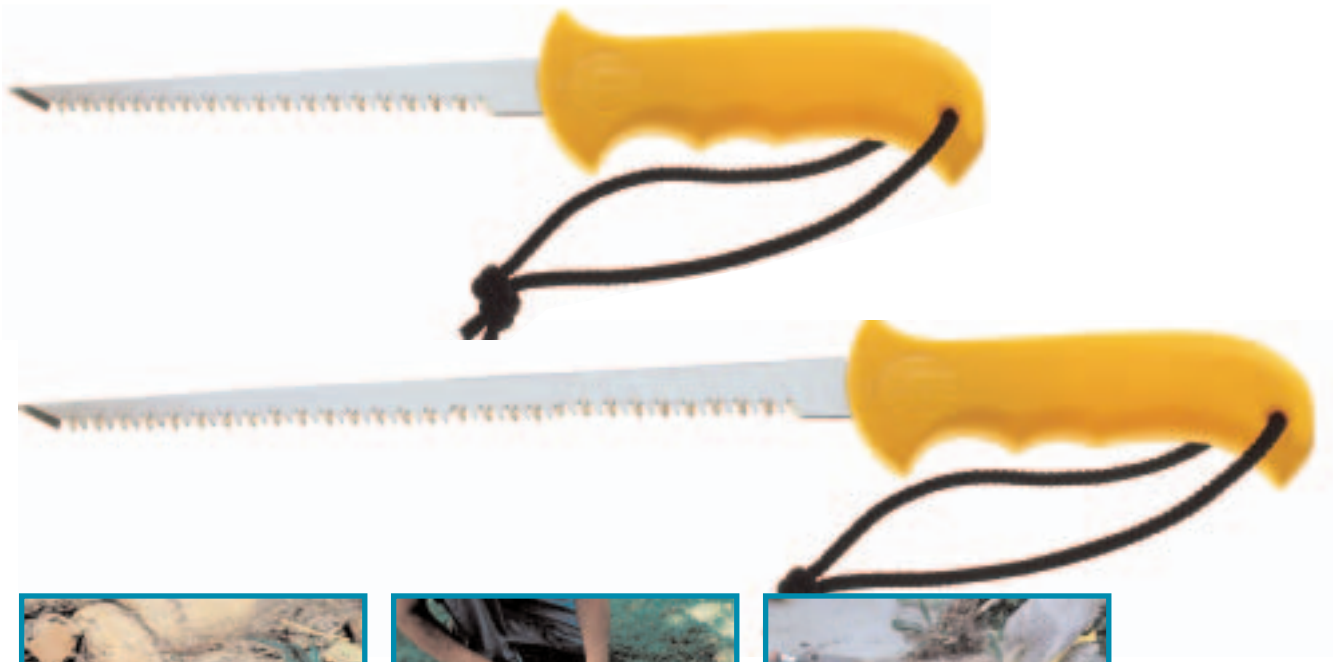
RootCutter®

#10-5206 6", 7 tpi
#10-5208 8", 7 tpi



Rootcutter® is the clean and easy way to cut unwanted roots! It's great for cutting overgrown roots along plastic pipe on irrigation jobs, and it makes a great tool for sod cutting and deep weeding. The stiff, sharply pointed blade of the Rootcutter® plunges into dirt and makes short work of cutting through unwanted roots in lawns and flowerbeds or cleaning roots out of holes or overgrown pots before planting. The high-quality carbon steel blade is impulse-hardened for long-lasting sharpness and chrome-plated to prevent rust. The teeth are extremely sharp—the two-cutting-edge design for pull-to-cut action provides extra power and control. The sure-grip patented handle is designed for comfort, safety, and ease of use and is made of long-lasting high-impact ABS plastic.
